About CIGLOO Secure Browsing

Cigloo is a next-generation browser isolation management platform. It provides organizations with the ability to enforce web isolation and assures that all malicious browser's code, email links, files and browsers-based apps operate outside of the core network, ensuring the security of sensitive corporate data.

Isolating All Web Interactions

Browser Isolation

Browse the internet in a remote secure browser environment to keep your core sensitive data isolated from the web and protected from browser-born vulnerabilities.

File Isolation

Download and upload files to an external isolated environment and after full-file sanitation, send the file to your local device and to your associates without any risk.

Mail Isolation

Click every email link on a remote isolated browser to prevent malicious URL interaction with your local device.

Browsing Benefits

Security

Employees can access any URLs without risk

User Experience

Preserve all user browsing preferences in a seamless user experience.

Management

Administrators can control and manage browsing policies

WIN WITH CIGLOO

How It Works

The Cigloo multi-platform management system supports top remote browsers technologies: Citrix XenApp, VMware Horizon View and Microsoft RDS, while providing the best seamless user experience with the highest security standards available. Cigloo is a proxy that protects all browsing aspects including: Who can access which URLs; when, how and where from, while handling other aspects of user's web interaction including file download and upload, clipboard management and mail internet access. Cigloo is delivered as a virtual appliance on top cloud platforms such as Amazon Web Services AWS and Microsoft Azure to enable use of top remote desktop (DaaS) and Remote browsers (BaaS) platforms in a secure manner.
